

Graduate Engineer Trainee — Network Engineering

Low-Latency Networking & Exchange Connectivity

Track	Network Engineering & Low-Latency Systems
Level	Graduate / Fresher (Trainee)
Eligibility	Computer Science or related field — Graduating 2025 / 2026
Environment	Mission-critical, ultra-low-latency HFT infrastructure

About the Company

Zanskar Research Pvt. Ltd. is a fast-growing, technology-driven firm focused on High-Frequency Trading (HFT) and high-performance computing. We specialize in building ultra-low latency trading systems and advanced infrastructure to gain a competitive edge in global financial markets.

Job Summary

We are looking for a strong fresher graduate with a solid foundation in networking, Linux, and systems fundamentals to join our infrastructure team as a Graduate Engineer Trainee. You will be trained on our mission-critical, low-latency trading environment — where performance is measured in microseconds — working alongside senior network engineers, system administrators, and quant developers. This is a hands-on learning role with a clear growth path into a full Network Engineer position.

What You'll Do (with mentorship)

- Get introduced to low-latency networking concepts (10/25/40/100GbE, multicast, DPDK/OpenOnload) as part of structured training
- Gradually get exposure to data centre networking concepts (VLANs, routing, L2/L3 basics)
- Assist in deploying and maintaining network infrastructure supporting Linux servers (Ubuntu, Red Hat, and other distributions)
- Learn and support performance tuning practices related to networking (CPU pinning, NUMA awareness, kernel parameters) under senior guidance
- Help monitor network health and assist in troubleshooting connectivity and latency issues
- Shadow and support senior network engineers on bare-metal server and switch management
- Write and maintain automation scripts (Bash, Python) for routine network operational tasks
- Help set up and maintain monitoring dashboards (Prometheus, Grafana) for network performance
- Build foundational understanding of HFT systems architecture, exchange connectivity, and market data flow

What We're Looking For

- Working knowledge of TCP/IP and core networking concepts (routing, switching, VLANs)
- Strong fundamentals in Linux (file systems, processes, shell usage)
- Comfortable writing scripts in Bash and/or Python

- Genuine curiosity about low-latency networking, systems performance, or financial markets infrastructure
- Strong problem-solving ability and willingness to learn in a fast-paced, high-stakes environment
- Good communication skills to work closely with traders, quants, and developers

Good to Have (Not Mandatory)

- Personal projects, internships, or coursework involving networking or Linux administration
- Exposure to cloud or virtualization platforms
- Familiarity with monitoring tools (Prometheus, Grafana) or version control (Git)
- Networking certifications (CCNA) or Linux certifications (RHCSA, LPIC) — optional, a plus

Academic Qualifications

- Bachelor's degree in Computer Science, Information Technology, or a related/adjacent field (B.Tech, B.E., B.Sc, BCA, or equivalent)
- CGPA: 7.5/10 or above
- Graduating in 2025 / 2026

Why Join Us

- Direct mentorship from senior network and infrastructure engineers working on cutting-edge low-latency systems
- Structured onboarding into HFT infrastructure, exchange connectivity, and ultra-low latency networking
- Fast-track growth path into a specialized Network Engineer role
